/note="Organ: ovary (pool of 3); Vector: pCMV-SPORT6; Site_1: ECORV (destroyed); Site_2: Not1; RNA source pool of three ovaries, from females ranging in age from 38 to 49 yo. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 2.1 kb, insert size range 1-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 036.
                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

* NOTE: This is a "working draft' sequence. It currently
consists of 10 contigs. The true order of the pieces
is not known and their order in this sequence record is
trus of N, but the exact sizes of the gaps are unknown.
This record will be updated with the flinished sequence
as soon as it is available and the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 188574;

hormone receptor with a fully defined sequence of 457 amino acids given hormone receptor with a fully defined sequence of 457 amino acids given can the sequence of 457 amino acids given to the specification. The novel human nuclear hormone receptor peptides and nucleic acids encoding them can be used as models for the development of human therapeutic of human therapeutic targets, aid in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate nuclear hormone receptor activity in cells and tissues that express the nuclear hormone receptor. The nucleic acids may be used as a query sequence to perform searches against sequence of atabases to identify family members or related sequences, as probes or primers, to construct recombinant vectors, to identify compounds that modulate nuclear hormone receptor nucleic acid expression, in gene therapy, and as antisense constructs to control nuclear hormone receptor gene expression in cells, tissues or organisms. The polypetides can be used to raise antibodies or to elicit an immune response, as a reagent in cassays designed to determine protein levels in biological fullads, as markers for tissues in which a corresponding protein is expressed, to identify a binding partner/ligand to develop a system for the assays and to identify compounds that modulate protein activity This polymoratide sequence represents the genomic DNA encoding the human continued in the number of not not protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              15239

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
```

```
The invention relates to detecting (MI) granulocyte (GC) activation (GGA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated

CC ct, where differential expression of Gs is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent

that alters the expression of at least one gene in Gs; (2) screening (M3)

Cf or an agent capable of modulating GCA or an inflammation (especially

chronic) in a tissue, an allergic response in a subject, exposure of a

subject to a pathogen or sterile inflammatory disease using the

CC subject to a pathogen or sterile inflammatory disease, by detecting the

chronic) in a tissue, an allergic response in a subject, exposure of a

subject to a pathogen or sterile inflammatory disease, by detecting the

chevel of expression of the gene is indicative of inflammation;

cc subject to a pathogen or sterile inflammatory disease, by detecting the

clevel of expression of the gene is indicative of inflammation;

cc the level of expression of the gene is indicative of inflammation.

cc the level of expression of the gene is indicative of inflammation.

cc (4) treating (M5) an inflammation (especially chronic) or in a tissue,

an allergic response in a subject, exposure of a subject to a pathogen

cc inflammation with an agent that modulates the expression of gene(s)

cc from GS in the tissue. M1 is useful for detecting GA; M2 is useful for

modulating GA; M3 is useful for screening an agent capable of modulating

cc GCA preferably in an inflammation in a tissue; M4 is useful for

creperfusion inflammation (especially chronic) in a tissue, an allergic

cresponse in a subject, exposure of a subject to a pathogen or sterile

inflammatory disease (e.g. psoriasis, rheumatoid arthritis,

creperfusion injury, ARDS, adult respiratory distress syndrome,

conducted disease, also bacterial infection, viral infection and M5 is

conduct repergented and agene differentially expressed in granulocytes.

The present invention describes a method (M1) for screening for an anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) expression of at least one gene (1) of a signature gene set, where (1) expression of at least one gene (1) of a signature gene set, where (1) expression is indicative of anti-neoplastic activity. (1) has cytostatic expression is indicative of anti-neoplastic activity. (1) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such, as colon, breast, stoomach, lung, thyroid, cesophageal, ovarian, kidney, prostate or pancreatic cancer.

Infiltrating lobular cancer, squamous cell cancer, infiltrating ductal cancer, infiltrating ductal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CCCGCCAGGCAGCTGTAGCCCCAGCCTCAGCCCCAGCTCCAACAGAAGCAGCCCGGCCAC 196

This sequence encodes the human retinoic acid receptor alpha, RAR-alpha which is used in a method for identifying a subject with acute promyelocytic leukaemia (APL) resulting from a t(15;17) translocation who will respond to treatment with all-trans retinoic acid. The protein can also be used to identify a subject with indications of APL who will not respond to treatment with all-trans retinoic acid.

This truncated comparated RAR-alpha-403, encodes a protein (AAR68024) containing the N-terminus, DNA-binding domain and part of the hormone-binding domain of RAR-alpha (AAR68023).

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as

                                                                                                                                                                                                                                      The sequence given represents the nucleic acid sequence of the retinoic acid receptor (RAR)-alpha gene. This gene is disrupted in a translocation of a portion of the long arm of chromosome 17 onto the long arm of chromosome 15 (t(15;17)(q21;q11-22)). This causes a fusion between RAR-alpha and myl Which is characteristic of acute fusion between RAR-alpha and myl Which is characteristic of acute and it has been shown that DNA rearrangements are clustered in the region of the first intron of RAR-alpha. This sequence was isolated by polymerase chain reaction (PCR). The primers used for amplification of this sequence can also be used to amplify the translocated region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1478

                                                                                                                                            5;
a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human hote: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 An RAR-alpha cDNA (given in AAQ81477) contained a truncation of sequences coding for the C-terminal 59 amino acids and part the 3' UTR of the wild-type human sequence (AAQ81476). This truncated cDNA, designated RAR-alpha-403, encoded a protein (AAR68024) containing the N-terminus, DNA-binding domain and part of the hormone-binding domain of RAR-alpha (AAR68023). RAR-alpha-403 has negative suppressor activity. Introduction into multipotent IL-3 dependent FDCP mix A4 cells (murine hematopoietic) caused a switch from neutrophil/monocyte differentiation to basophil/mast cells (30-50%), with only 2% neutrophils.
